COR-BON

Self Defense, Law Enforcement and Tactical Operations.

CorBon is the leader in high velocity ammunition, generating maximum performance from every loading. CorBon is proud of this reputation and is willing to put that velocity right on the box. These are real velocities, from real guns - not just test barrels. Every company has to have a niche in the marketplace. Peter Pi, the founder of CorBon, decided that someone had to be the best and built his company around that idea.

The faster a bullet is traveling, the more energy created. Energy developed at the muzzle must be transferred or "dumped" into the target to be effective. Energy transfer is aided by bullet expansion. The higher the velocity, the more rapidly the expansion -- the more rapid the expansion, the more effectively the energy is expended in the target. This explosive expansion dumps the available energy quickly, creating tremendous shocking power and causing the perpetrator to cease doing further harm, thus STOPPING POWER. Stopping power means safety.

Hollowpoints that are moving too slow, or are of a "controlled expansion" design can over penetrate -- going straight through the target with little effect. Energy that passes through the selected target is wasted energy and can cause harm to unintended persons or property. Your intent is to STOP the aggressor that is bent on doing harm to you or your family.

Don't be misguided by those who claim their bullets have some magical or mystical performance advantage, or that they can make a reduced power load <u>with</u> increased performance. It isn't possible!

There continues to be a misconception that a heavier bullet somehow has more energy and that a long deep wound channel is necessary. That may be true in a hunting bullet, but in close quarters combat, the trade of less weight and added velocity is a positive increase in energy. Energy is energy and if effectively transferred into the target - it does not matter whether it is energy from a 32 AUTO or a .45 ACP.

CorBon ammunition is tested against common barriers. When shot through four layers of heavy material, (including leather) the CorBon bullets retain adequate velocity to reliably expand -- even out of the shorter compact guns. Tests against windshield glass and car doors proved that the high velocity CorBon bullets do not deflect from their intended path and still expanded well into a gelatin medium. Car doors and windshields are no barriers to CorBon high velocity ammunition.

There may be less expensive ammunition available, but are you going to bet your life on what you think is a bargain?

Bee Safe™ Pre-Fragmented Safety Ammunition

BeeSafe PLUS Self Defense Ammunition contains a special patented pre-fragmented safety bullet designed to transfer all the available energy into the target. Each bullet is composed of a soft lead cap, backed by a row of pellets. The lead cap facilitates initial penetration through heavy clothing. Once through the outer barrier this cap is driven back into the pellets, opening up the jacket for violent expansion and dispersion of the pellets; creating multiple wound channels and a shocking effect. This instant energy transfer assures that you are getting the maximum stopping power from every caliber.

With this unique design, this very high stopping power is obtained with very low recoil and reduced muzzle flip. The BeeSafe bullet disperses the energy rapidly and is less likely to penetrate through the intended target or to enter an adjoining room intact. The bullet breaks up upon hitting any interior walls or doors, making it an extremely safe close-range ammunition, especially suitable for high population density situations and for "in-home" personal safety and protection. Recoil is extremely soft for a bullet that backs such a devastating punch and is just the ticket for lightweight, compact pistols. Safe to shoot in modern Titanium or alloy frame pistols.

The BeeSafe bullet has a round soft nose and can be carried in states and countries that restrict the use of hollowpoint ammunition. Eight round per package.

400 CorBon Load Data

The 400 CorBon was developed by taking a .45ACP case and necking it down to .40 (10mm). It was the goal of designer Peter Pi to make this cartridge design simple and functional. For most guns a simple drop-in barrel is all that is needed to convert a .45ACP to the 400 CorBon. It is possible to make the 400 CorBon from existing (new) .45ACP brass, however formed brass with correct headstamp is available from Starline, and is recommended.

Because the 400 CorBon headspaces off the shoulder, it is important to maintain a distance from the base to the shoulder midpoint (datum line) of min. .717", max. .725. A fired case from your gun will give you a good comparison. We suggest that a tight bullet crimp be used. A roll crimp gives a much more effective hold than a taper crimp. It is usually not necessary to bell out the case mouth for bullet seating. Excessive belling of the case mouth makes it difficult to maintain a strong tension on the bullet when crimping. Overall length of completed cartridge should be no longer than 1.225".

The 400 CorBon is a new cartridge design. While extensive testing has been done by CorBon Bullet Co., it has not been possible to test these loads in guns and/or barrels manufactured by all companies. it is extremely important that you begin with the starting loads, and test these loads in your gun. This load data concentrates on jacketed bullets. Cast bullets and/or bullets over 165gr. have not been tested in quantity by CorBon.

CorBon uses powders that are not available in canisters for reloading - thus, it is not possible to duplicate factory performance, velocity and energy. Loading the powders shown here above MAX load may result in dangerous pressures, possible damage or personal injury.
NEVER EXCEED THE MAXIMUM LOADS IN ANY GUN!
DO NOT USE HANDLOADS DEVELOPED BY SOMEONE ELSE --

There are two types of 400 CorBon brass. The original brass took a large pistol primer. We suggest CCI 300 large pistol primers. Modifications to the brass were done in the last quarter of 2000 to take a small pistol primer. For a small primer we use Winchester Small Pistol primers. WARNING: Winchester Magnum Primers or CCI small pistol primers give higher pressures.

COR-BON Hunting
Photography by: Ken Archer

454 Casull

The CorBon designed Bonded-Core style bullets are not just another pretty face. These are true heavy-duty hunting bullets of the highest quality. Each bullet is carefully weighted, swaged, and inspected by hand to ensure that you have the strongest bullet available. The bonded-core design fuses the interior lead and outside jacket together. The integrety of the bullet is maintained, even when pushed to very high velocities. Upon impact they will expand creating a devastating mushroom -- plowing through tough hide and bone.

For very large and dangerous game CorBon makes a super strong Flat-Point Penetrator bullet. This design gives no expansion and the flat point meplat creates a distinctive knockdown "smack" to the equation. Nobody makes anything close to the power and performance of this distinct design.

CorBon has been producing 454 Casull ammunition for over 15 years and offers a load for any hunting situation.

44 Magnum

The 44 Magnum has 40 years of hunting experience under its belt. It is the hunting caliber from which all others are judged. CorBon loads a full lineup to meet any situation. There are lots of companies providing loads for this cartridge. CorBon takes the 44 Magnum seriously.

The light and super fast 180gr JHP and 240gr JHP are the ticket for varmints, small game and light deer. The 260gr bonded-core hollowpoint is the pick of the litter for serious hunting with a handgun. It is a strong bullet that gives good expansion and the extra range and flat trajectory necessary of tough hunting situations. If your deer hunting includes big bucks, elk or even moose, the 280gr bonded-core soft point provides additional penetration for larger game. These are exceptional loads that can be carried for almost any situation. These bullets are not just good - they as good as it gets.

The 300gr Jacketed Soft Point design allows the lead to roll out into a tissue-tearing mushroom. A good heavy load for brush and dense cover. Nothing made for the 44 Magnum tops the 305gr Flat-point Penetrator load for power and penetration against dangerous and hard to stop game. If you live or hang out where the game has big teeth and claws -- this is serious medicine for dangerous critters.

Many hunters opt for the traditional design and performance of the hard cast bullet. Aim for the point of the shoulders and you will have your game right under where the sights were. The wide meplat smacks with authority and power.

Loaded with one of CorBon's high performance loads; your 44 sixgun is back to the power Elmer Keith envisioned.

With these 180gr Bonded-Core bullets, you'd better have freezer space ready. If you keep shots well-within your ability, these loads offer the maximum in close range hunting.

The 200gr Hard Cast or Penetrator loads pack an extra punch when bone-breaking power is needed. Often carried as a sidearm for protection. These loads can keep you from being on some large bears dinner menu.

45 Colt Magnum +P

CorBon has given the traditional 45 COLT revolver hunting loads worthy of the designation: MAGNUM. These are true high performance loads with the attached +P as an additional caution. In the appropriate modern hunting pistol, these .45 COLT Magnum loads give near 44 Magnum performance with markedly less recoil. This is NOT plinking ammo; this load should only be used in those guns that have the steel to handle the power.

Guns in .45 COLT that are built on heavy duty frames, will handle this load with authority. This is NOT intended for handguns such as Colt Single Action Army, the Colt clones, imported single action revolvers, or guns with alloy or Titanium frames.

USE GOOD COMMON SENSE.

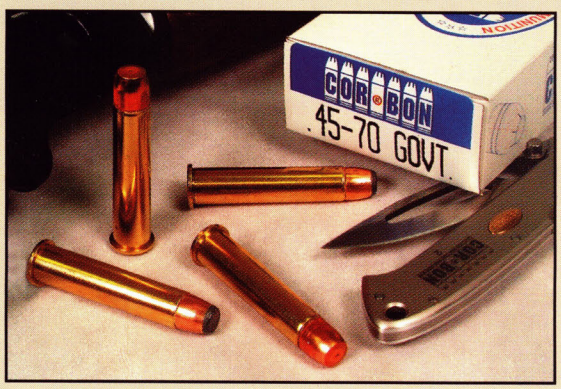
444 Marlin

Nothing quite grabs a seasoned outdoorsman like the feel and power of a quality lever gun. To top that off are these powerhouse loads that pack awesome energy and close range knockdown performance. Just look at these charts -- this is a real whooper that can take everything from Eastern deer to Alaskan bear. Each bullet is manufactured to CorBon's exacting standards, and loaded to give performance advantages you expect from this cartridge. Hold on tight, these loads are made for the serious shooter that demands the very best and expects nothing less!

When you think of a close range brush gun, the 45-70 Govt comes to mind in a flash. One of the most popular and widely used cartridges of all time. CorBon produces strong hunting loads that bring the power and energy up there to where they should be to make this veteran perform to its capabilities.



It takes a strong bullet to stand up to the high velocity and punishing power of these loads. The CorBon bullets can take the heat!

These are modern loads for modern guns and should not be used in older guns, trap door models or replicas. Nobody makes anything even close to the CorBon loads. If you want only the very best -- here it is!

Single Shot Hunter

New from Cor-Bon is the *Single Shot Hunter* line of ammunition. This new line incorporates a specially designed bonded-core spitzer bullet and fast burning powder to give optimum performance from the shorter barreled single shot pistols. This is not just repackaged rifle

ammunition. These loads were built and tested from the ground up for use only in single shot pistols.

The bonded-core bullet uses a specially designed copper jacket that can withstand high velocities, yet it is somewhat thinner, with a different taper to expand reliably at a lower velocity range. Typical rifle ammunition used in a short barreled pistol will sprue out unburnt powder and the heavier jacket required of rifle ammunition will restrict the expansion.

CorBon has selected premium powders to give high velocity, but with significantly less recoil. Pistol hunting should be a challenging and rewarding sport. You shouldn't have to be punished by bone jarring recoil. Cor-Bon gives you options that have never been available before. No other company takes the extra effort to produce such a special load.

Hunting with pistols is a growing sport you should not ignore. Sportsman enjoy the challenge of stalking and getting close. Cor-Bon is a premium line that caters not only to the recreational shooter but to the serious big game sportsman that demands the best when they take to the field.

The single shot hunter loads use pointed soft point "spitzer" style bullets. <u>They cannot be used in tube feed magazines.</u>

The new Thompson-Center Encore™ , the Lone Eagles, MOA pistols and several short-action bolt pistols are now being chambered in such heavyweight cartridges as the 30-06 Spfd. the .308, the 7mm-08 etc. The flat shooting accuracy and extended range that these popular cartridges bring to the spectrum are sure to expand the number of sportsmen hitting the field armed with a special single shot pistol.

CorBon believes in the future of the sport and tries to produce the finest hunting ammunition available. Packaged in a 10 round display case, using nickel plated brass.

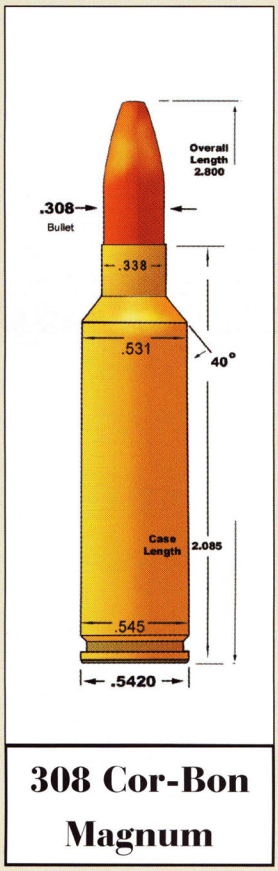
130gr 7mm bullet recovered from a large Western whitetail. Bullet broke facing shoulder, drove through both sides of the rib cage, heart and lung cavity, and was found just under the skin on the off side.
92% weight retention.
80 yard shot from a T/C Encore using CorBon's 7mm-08 Single Shot Hunter.



308 Cor-Bon Magnum

308 Cor-Bon Magnum

High mountain ridges, rough river breaks, and thick bottom lands harbor the most elusive wall-hangers. This is tough hunting, where days of deliberate searching may yield only one long range shot at that sought after trophy. You need a flat shooting cartridge that will carry knock down energy out to maximum shooting range. Plus, you need this chambered in a firearm that won't weigh you down and tire you out -- that is easy to point, fast on moving game, and dead-on accurate for as far as you can see. This is it!

The new 308 Cor-Bon Magnum equals the performance of a full-length magnum cartridge, but has an overall length of 2.80" - no longer than the common .308 Win. This short-action length makes the 308 Cor-Bon Magnum a perfect cartridge for use in a light weight, fast handling mountain style gun.

The short, high-volume case and sharp shoulder design produces a compact powder column. Powder is burned more efficiently producing impressive power and accuracy with noticeably less recoil and muzzle blast than the long, belted-magnums. The 308 Cor-Bon Magnum is a versatile design, that makes a tremendously potent and effective hunting pistol. This is a serious big game pistol cartridge capable of awesome killing power at unheard of pistol ranges. Yet this revolutionary design substantially negates the sharp recoil of a longer magnum cartridge.

Ballistics on this new cartridge are most impressive. This is a very potent cartridge with excellent down-range flight characteristics and sustained energy. Reamers, brass and loaded ammunition are available. A competent gunsmith will be able to convert an existing short action gun to the new 308 Cor-Bon Magnum.

440 CorBon Magnum

The 440 CorBon Magnum combines the excellent ballistic coefficient of the 44 caliber bullets with the case capacity of the 50AE. This marriage produces a hyper-velocity cartridge with the advantages of both parents. The bottleneck cartridge is a super idea that produces a hunting round capable of very flat trajectory and amazing down range power. This design works well in single shot pistols or the hefty autopistols.

Imagine if you will a semi-automatic handgun with an eight round magazine -- the power of a 260gr bullet screaming along at over 1700fps and producing 1670 ft/lbs of energy at the muzzle. This is serious fire power in a handgun. The combination of gun weight and higher velocity tames the expected recoil admirably. It's much more pleasant to shoot than you would think.

This cartridge is being adopted by several manufacturers. Magnum Research has Desert Eagles and barrel conversions ready to go. They also chamber this cartridge in the Lone Eagle, single shot pistol. Galena AMT has the stainless AutoMag available in the 440 CorBon Magnum also.

The Next Time You Win The West -
Use The Loads That Won The West

US Cavalry reproduction Ammunition is loaded with modern Black Powder to give the realistic smoke and kaboom of the traditional loads of the Old West. Modern Black Powder reduces fouling and the corrosive effects of sulfur based charcoal powders.

For those of you born a 100 years too late, CorBon offers a bit of nostalgia. The US Cavalry Black Powder Ammunition was developed with the traditions of the Old West in mind. Available in 45 Colt, 38 Special, 45 Schofield, and 44WCF (44-40). They are packaged in a 96 round bulk carton with 'old timey' looking graphics.

While the pistol and lever gun were popular defensive weapons, the Scattergun was a true intimidator. Stagecoach guards and lawmen were often seen packing their trusty scattergun for those unfortunate times when things got out of hand.

Traditional paper hulls are loaded with lead shot and pushed with a modern Black Powder.

Ten rounds of 12 gauge come in a realistic cardboard box.
